

Conference Report

Name: Deepak Ailani

Conference Title: Circuits and Behaviour Conference

Title of presentation : Functional imaging of the hypothalamus in fixed and free swimming zebrafish

Evaluation of the meeting: The meeting in Tuscany was attended by professors, postdocs and students from diverse fields who had an overlapping interest in understanding the mechanisms of sensory processing, neural circuit dynamics and behavior generation. It was a great opportunity for me to learn about the latest advances in this field and it provided an excellent opportunity for one-on-one discussions. By presenting my work at the conference, I got an expert opinion on my project which will be very helpful for my future research direction.
